Trac Navigation

Starting with Trac 0.11, it is now possible to customize the main and meta navigation entries in some basic ways.

The new [mainnav] and [metanav] configuration sections can now be used to customize the text and link used for the navigation items, or even to disable them.

[mainnav] corresponds to the **main navigation bar**, the one containing entries such as *Wiki*, *Timeline*, *Roadmap*, *Browse Source* and so on. This navigation bar is meant to access the default page of the main modules enabled in Trac and accessible for the current user.

[metanav] corresponds to the **meta navigation bar**, by default positioned above the main navigation bar and below the *Search* box. It contains the *Log in*, *Logout*, *Help/Guide?* etc. entries. This navigation bar is meant to access some global information about the Trac project and the current user.

Note that it is still not possible to customize the **contextual navigation bar**, i.e. the one usually placed below the main navigation bar.

Example

In the following example, we rename the link to the Wiki start "Home", and hide the "Help/Guide?" link. We also make the "View Tickets" entry link to a specific report.

Relevant excerpt from the <u>TracIni</u>:

```
[mainnav]
wiki.label = Home
tickets.href = /report/24
[metanav]
help = disabled
```

See also: <u>TracInterfaceCustomization</u>, and the <u>?TracHacks:NavAddPlugin</u> or <u>?TracHacks:MenusPlugin</u> (still needed for adding entries)
