## Welcome to ALMOS Project

ALMOS (Advanced Locality Management Operating System) is a research operating system currently under development at the <u>?SoC</u> department of the Laboratory <u>?LIP6</u> ( <u>?Université Pierre et Marie Curie in Paris</u>).

This research operating system is targeting <u>?TSAR</u> (Tera-Scale ARchitecture) a massively multiprocessors cc-NUMA which is clusterized and scalable architecture up to 4096 processors and 1 Terabytes of physical memory.
