

InterMapTxt

This is the place for defining InterWiki prefixes

This page is interpreted in a special way by Trac, in order to support InterWiki links in a flexible and dynamic way. It is modeled after the [?MeatBall:InterMapTxt](#) page. In addition, an optional comment is allowed after the mapping.

The code block after the first line separator in this page will be interpreted as a list of InterWiki specifications:

```
prefix URL [# comment]
```

See [InterWiki](#) for more details of the URL syntax.

New InterWiki links can be created by editing this page and adding to the list. Note however that *deletions* are also taken into account immediately, so be aware that your changes might disable links in your wiki. It may be better to use comments for deprecating prefixes that are used in your wiki.

The definitions below can be viewed in the [list of active prefixes](#).
