Tasks

Tasks are instanciations of <u>TaskModels</u>. At instanciation, tasks must have all their <u>resources</u> connected.

```
exemple_inst = Task( "exemple_task_name", exemple_task_model,
                    {
                        "port1" : resourceA,
                        "port2" : resourceB
                    },
                    {"DEF_NAME": 'value'}
                )
```

They are grouped to form a <u>task and control graph</u>
