Options when instanciating MutekS

WARNING

/!\ Those flags are not yet implemented in DSX'2008.

Verbosity

<u>DsxLogging</u> facility will output log messages only if more important than current selected level. You may override this level by setting verbosity e.g.:

```
muteks = MutekS( verbosity = "TRACE" )
```

Stack usage tracing

MutekS has fixed limited stack depth for all functions (defined at <u>software task implementation</u> declaration). Rather than trying different values and watching your software crash, you may want to put a big stack space, and watch which part of the available space was actually used. This can be archieved setting STACK_TRACE flag:

```
muteks = MutekS( features = [ "STACK_TRACE" ] )
```
