You may define some flags to be passed to tasks at compile time. They will be added to compile line as `-DKEY=value` on every source file for a given task

Warning

Defined values when compiling a C file are unpredictable if

- This C file is **shared between tasks**
- The task corresponding to the C-file is **instanciated more than once** with **different** defines

If the only purpose is to pass up a numeric value, you should use `consts`.
