SrlApi

Srl API is your gateway to software resources.

Log API

Log API let you define message levels. Levels allow you to let your debug code in the source, and only compile it when needed.

- `srl_log(level, "message")` prints a message
- `srl_log_printf(level, "message_with_format", arguments)` prints a printf-like message

Mwmr fifos API

- `srl_mwmr_read(fifo, buffer, size)` reads `size` 32-bit words from fifo to buffer. `size` must be a multiple of fifo width.
- `srl_mwmr_write(fifo, buffer, size)` writes `size` 32-bit words from buffer to fifo. `size` must be a multiple of fifo width.
