Wiki Page Names

Wiki page names are written using <u>CamelCase</u>. Within a wiki text, any word in <u>CamelCase</u> automatically becomes a hyperlink to the wiki page with that same name.

Page names must follow these rules:

- 1. The name must consist of **alphabetic characters only**. No digits, spaces, punctuation, or underscores are allowed.
- 2. A name must have at least two capital letters.
- 3. The first character must be capitalized.
- 4. Every capital letter must be followed by one or more lower-case letters.
- 5. The use of slash (/) is permitted to create a hierarchy inside the wiki. (See SubWiki and ParentWiki macros in the <u>?MacroBazaar</u> which provide a way to list all sub-entries and a link up the hierarchy respectively.)

If you want to create a wiki page that doesn't follow <u>CamelCase</u> rules you could use the following syntax:

[wiki:Wiki_page]

This will be rendered as:

Wiki_page?
