

Using HTML in Wiki Text

Trac supports inserting HTML into any wiki context, accomplished using the HTML [WikiProcessor](#).

HTML support is built-in, and does not require installing any additional packages.

How to Use HTML

To inform the wiki engine that a block of text should be treated as HTML, use the *html* processor.

This example should explain:

```
{{{
#!html
<h1 style="text-align: right; color: blue">HTML Test</h1>
}}}
```

Results in:

HTML Test
