TracAdmin

Error: Macro TracGuideToc(None) failed

'NoneType' object has no attribute 'find'

Trac is distributed with a powerful command-line configuration tool. This tool can be used to configure and customize your Trac-installation to better fit your needs.

Usage

You can get a comprehensive list of the available options, commands and sub-commands by invoking trac-admin with the help command:

trac-admin help

Unless you're executing the help, about or version sub-commands, you'll need to specify the path to the <u>TracEnvironment</u> that you want to administer as the first argument, for example:

```
trac-admin /path/to/projenv wiki list
```

Interactive Mode

When passing the environment path as the only argument, trac-admin starts in interactive mode. Commands can then be executed on the selected environment using the prompt, which offers tab-completion (on non-Windows environments, and when the Python readline module is available) and automatic repetition of the last command issued.

Once you're in interactive mode, you can also get help on specific commands or subsets of commands:

For example, to get an explanation of the resync command, run:

> help resync

To get help on a all the Wiki-related commands, run:

> help wiki
